### ONE RESEARCH FOUNDATION FUNDS NEW PILOT STUDY

The ONE Research Foundation is pleased to fund a new pilot study to assess the feasibility of a recently developed, multi-modal, mind-body intervention called Neuro Emotional Technique (Monti, et al., 2007) in patients who suffer from distressing recollections that may or may not be cancer-related.

Co-principal investigators: Daniel A. Monti, M.D., and Andrew B. Newberg, M.D., of the Jefferson-Myrna Brind Center of Integrative Medicine and the Jefferson Kimmel Cancer Center, Thomas Jefferson University and Hospital, Philadelphia, PA.

This pilot study will help to validate the use of NET to help cancer survivors become less physiologically reactive to distressing stimuli and to become more capable of choosing alternative responses.

For more information about this study, please go to our website under [Research Updates](#). You will find the background and rationale for this important study along with information on both Dr. Monti and Dr. Newberg.

OUR NET EFFECT

THANK YOU

[Daniel A. Monti, M.D.](#)
